Success in any business—from a local food stand to a multimillion-dollar tech business—depends on the strength of your offer: what you present to the customer to try to earn their business. But how can you create not just any offer, but a *lucrative* one that people can't refuse? In [\\$100M Offers](#), entrepreneur and marketing expert Alex Hormozi breaks down his strategies for creating offers that consistently generate massive, life-changing revenue.

[Hormozi](#) is an entrepreneur and investor with experience both in scaling up his businesses and helping other entrepreneurs achieve their revenue goals. Drawing on this expertise, **he provides recommendations that will help you maximize earnings by fine-tuning every aspect of your offer.** By following his guidelines, Hormozi writes, you'll have customers clamoring to take you up on your offer, and you'll gain the financial freedom that every entrepreneur dreams of.

We'll go through each component of a successful offer, starting with the foundation: creating a high-value product. Then, we'll explain how to set high yet fair prices for your products and how to identify your ideal target market. Lastly, we'll explore ways to boost your offer's appeal by leveraging scarcity, urgency, bonuses, guarantees, and compelling offer names.

Throughout the guide, we'll supplement Hormozi's recommendations with insight into some of the psychological principles behind the sales tactics and with additional advice from experts on the most effective ways to attract customers and grow your business.

The Offer Foundation: A High-Value Product

An offer, as Hormozi describes it, includes everything you're presenting to the customer to get their business. The foundation of every good offer is a high-value product that can command premium pricing.

What exactly makes a product high-value? Hormozi says that **a high-product value makes customers believe it will fulfill their deep desires with minimal effort on their part.** It also minimizes how long it takes to achieve those deep desires: If the process to achieve the end result takes a while, there should be smaller gains along the way to keep them engaged. This caters to people's general aversion to delayed gratification.

To illustrate these components of a high-value product, consider the following example: You've created a comprehensive online course and mentorship program to help people start and grow an online business.

- The product **appeals to deep desires**, such as financial freedom, being your own boss, and creating wealth and legacy.
- It **provides a quick path to positive results** via a proven step-by-step system that takes a beginner from an idea to a profitable business in six months.
- The program also **minimizes the effort required** through extensive training videos, user-friendly templates and tools, and personal mentorship from successful entrepreneurs who can answer customer questions.
- Lastly, it **highlights shorter-term wins** like building an online presence and generating the first revenue stream within weeks to keep people motivated.

There Are Different Kinds of Value

In defining a high-value product, Hormozi assumes that the end goal is high profits. However, others advocate business models that prioritize positive community impact alongside profitability. For instance, a product or offer might be high-value because it sources the product materials ethically—making it more environmentally sustainable. This suggests that the criteria for a high-value product may depend in part on your larger goals.

With that said, social good and financial profit aren't necessarily mutually exclusive goals. Some experts assert the key to a successful business is *balancing profit with social good*. They argue that when businesses support social and environmental causes, this can improve the company's profits by attracting loyal customers who want to support businesses that align with their values.

So, in addition to the various benefits a product offers to you and your customer, you might also consider how it could help a particular community.

Designing Your High-Value Product

With these characteristics of a high-value product in mind, we'll walk through Hormozi's steps for designing your own high-value product and, later, modifying it to reduce your workload as your success grows.

Step 1: Identify a Customer's Deep Desire

Hormozi's first step in designing a product is to **decide which desire you want to fulfill for your customers**. Naturally, before you can design a product, you have to know what that product's purpose will be.

(Shortform note: When determining what product or service you want to sell, it's often helpful to choose something that you yourself are passionate about. In *Purple Cow*, marketing expert Seth Godin explains that the highest-quality products are often made by people who are personally interested in those products because they make things that *they would want to buy*. For instance, if you're really into football, you might design a piece of sporting equipment or fan merchandise that you'd purchase yourself, if it existed.)

Step 2: Identify Potential Roadblocks

Make an exhaustive list of all the different roadblocks that might prevent customers from fulfilling their deep desire. In the previous example with an entrepreneurship program as the product, this might include things like the inability to travel for a training program, or a busy schedule that generally makes extra time commitments difficult.

(Shortform note: Although this step is part of the process for designing your product, it may also help to repeat this step regularly; the roadblocks your customers face may evolve over time, which may require you to *review and refine your company's offerings*. For instance, if your product is an in-person group workshop, the Covid-19 pandemic would have necessitated new solutions, since meeting in person wasn't an option during that time. However, you could turn that roadblock into added value for your workshop by creating an online option for participants, thereby making the workshop more convenient and more accessible.)

Step 3: Turn Roadblocks Into Solutions

Next, Hormozi advises you to **write down a solution that corresponds to each challenge in your list from Step 2**. Then assemble these solutions into a product that's not only unique, but also addresses every

potential roadblock related to the customer's deep desire. This will significantly increase your product's value.

For example, to address a customer's time constraint, the entrepreneurship program might include training materials available in audio format, so they can listen while they're driving or doing other tasks.

Alternative Approach: What Task Does Your Product Accomplish?

In *Competing Against Luck*, business consultant Clayton Christensen suggests a different approach to increasing the value of your product. Instead of trying to predict the challenges customers will face, Christensen suggests asking yourself what *task* people are trying to accomplish by buying your product—and in what context—then designing the product with [the entire customer experience in mind](#).

To continue the previous example, someone purchasing an entrepreneurship course is most likely trying to start their own business, and you've already identified that they're doing so in the context of a busy life without a lot of free time. Therefore, instead of offering an audio version of your training program as an afterthought, you might design the program from the ground up to be something that people can do quickly or that they can pick up for a few minutes at a time whenever they have a moment to spare.

Step 4: Adjust for Sustainability Over Time

Once you've built up a loyal customer base, Hormozi's last step is to **modify your product to reduce your workload while maintaining a good value for the consumer**.

By addressing all possible challenges for the customers, you'll have created a highly attractive, user-friendly product that's hard for people to turn down. This will help you establish credibility and a high demand for your product. However, this kind of product may be difficult to sustain in the long term due to the resources and effort it requires from you. Therefore, it will help if you can make changes to your product or business model to make things easier on yourself.

For example, you might create a series of Frequently Asked Questions pages to ease the pressure on your company's helpline and reduce the time it takes to assist customers.

(Shortform note: Tweaking your product or business model to reduce your own workload is a good start, but many entrepreneurs would argue that Hormozi's suggestion doesn't go far enough. In *The 4-Hour Workweek*, serial entrepreneur Tim Ferriss says your goal should eventually be to automate your business so that it runs with [little to no input from you](#). To accomplish this, Ferriss suggests that you automate your business in phases as your company grows (and, therefore, as you can afford more automation). By doing so, you can gradually transition from personal involvement in every aspect of the company to outsourcing tasks like order fulfillment and customer service.)

Set the Right Price: High, Yet Fair

Once you have your high-value product, the next key aspect of a successful offer is to figure out how to price the product. To maximize your profits, **Hormozi advises that you set high prices that still feel like a good deal to your customers**. In this section, we'll cover the three pricing principles he explores: creating

a unique product to avoid price-cutting competitions, capitalizing on niche markets, and leveraging high prices to increase prestige and customer commitment.

Strive for a Unique Product to Avoid Price Competition

Hormozi recommends that your offer provide such unique benefits that it eludes direct comparison with competitors. If your product is a commodity that people can find elsewhere, you may get stuck in a constant price-cutting battle that hinders business growth. Each business will try to keep lowering prices to attract more customers until the profit margins are too small to sustain the business. By offering something distinct, you can avoid this pricing competition.

Hormozi writes that if you do find yourself in a direct competition, **it's more effective to raise the value of your offer than to drop your price.** For example, you might add accessories or features to your product and *increase* your price, rather than dropping the price to match the current market. This approach maintains large profit margins and reinforces the high worth of your product.

Tip: Unique Products Come From Extremes

If your goal is to create something unique and remarkable, don't try to make something "good," meaning a product with broad appeal that everyone will want to buy. As Seth Godin explains in *Purple Cow*, any "good" product you come up with **almost certainly exists already**.

Instead, Godin encourages you to go the opposite direction: **Brainstorm what extremes you could take your product to, regardless of how popular you think it will be.** For example, a very spicy candy bar (an extreme flavor) won't be as popular as regular milk chocolate, but you won't have to compete with established brands like Hershey's. Some other possible extremes are quality, price, and product appearance.

Godin adds that once you have an idea, *don't compromise on it*. Any kind of compromise is almost certainly going to push you back toward "good"—an unremarkable product that most likely already exists.

Capitalize on Niche Markets

Hormozi also explains that specialized, **niche products can command higher prices because they cater to specific needs.** These items appear custom-fit, distinguishing them from generic alternatives. For example, rather than offering a generic prenatal vitamin, you could offer a more expensive line of customized prenatal vitamins and supplements specifically formulated for the parent based on their trimester, age, dietary restrictions, and individual nutritional deficiencies.

(Shortform note: Seeking a market—even a small, niche one—where you won't face much competition is often called a Blue Ocean Strategy, after the [book of the same name](#) by business professors W. Chan Kim and Renée Mauborgne. Kim and Mauborgne also provide a helpful method for checking [how much competition your new product might face](#). They suggest making a line graph where the x-axis lists the various characteristics of your product, such as price and ease of use, and the y-axis represents how much emphasis the product places on each of those characteristics. Then, chart your product alongside similar products from your competitors. If your product closely matches with another product, then you're not targeting a unique niche and you'll face strong competition.)

Leverage Pricing to Increase Prestige and Customer Commitment

Another key pricing principle that Hormozi emphasizes is that **charging the highest prices in the market can bring a sense of prestige to your product, enhancing its appeal**. When people see the high price, they're more likely to assume it's the highest quality option available.

Moreover, **a heftier price tag encourages customers to be more committed to your product**, leading them to engage more deeply and consistently with it. This commitment is particularly important if your product requires customer participation—like using a new software or completing a fitness program—to achieve good results. In these cases, their participation not only benefits them (assuming they enjoy the product) but also enhances the perceived value of your product by increasing the chances they'll achieve the deep desire that your product promised.

For example, if you offer a fitness app that's free or cheap, and the customer doesn't use it regularly, they're less likely to reach their fitness goals regardless of the app quality. This might leave a generally negative impression on the customer. On the other hand, if you sell someone an expensive fitness app, they'll be more motivated to use it consistently. As a result, they'll be more likely to reach their goals and to associate that achievement with your product.

(Shortform note: Budget-friendly gyms like Planet Fitness have found success by taking the opposite tack on pricing. By offering low-cost memberships, these gyms make their services seem accessible to everyone—they remove the air of prestige associated with more expensive and exclusive gyms. However, this business model capitalizes on people's good intentions and initial motivation while counting on the fact that many members will [rarely, if ever, actually use the facilities](#). The low price point ensures a steady stream of income from a large member base, while the lack of commitment keeps overhead costs low because people aren't using their buildings or their equipment.)

Identify Your Ideal Market

To successfully create a lucrative offer, you must choose the right market—one where your ability to meet your customers' needs, your customers' ability to afford your product, and growing demand for your product intersect. In this section, we'll explore Hormozi's recommendations for finding an ideal target market. We'll also explain why it's better to commit to one market and stick with it, rather than shifting your focus.

Tap Into Existing and Growing Needs

The first recommendation is to **search for customers who already have a pressing need for your product**. Hormozi explains that this kind of customer will be more inclined to pay higher prices to address their deep desires.

To find customers with an existing need, you might direct your marketing efforts toward those who have already shown an interest similar to what your product offers. For example, you could target individuals who have subscriptions for other services related to your product or memberships in relevant trade groups.

Hormozi also recommends that you opt for a market that's currently expanding, meaning more and more people have a need for your product. **An expanding market suggests a sustainable and increasing demand for your product, ensuring that your business has room to grow**. Choosing a shrinking market, like selling new film cameras, will make sales more challenging as the market trends toward digital photography.

Tip: Beware of “Growing Pains” in Business

In *The Voltage Effect*, economist John List provides several warning signs that a particular market will not scale well, and therefore is *not* a good choice for your new business:

1. **A niche market lacking broad appeal:** Even if a product is popular with its original audience, that doesn't mean it will appeal to the general public—in such a case, your business won't be able to grow effectively. For example, Google Glass (Google's attempt at “smart” glasses) may have been exciting to tech enthusiasts and some businesses, but most people were turned off by the [high price tag and privacy concerns](#).
2. **Consequences of scale:** Ideas and products that are successful on a small scale often encounter problems on a larger scale. For example, adding a small amount of lead to gasoline improves engine performance. However, when used on a large scale, the toxic emissions caused physical and mental health problems for people all over the world—this eventually led to a [worldwide ban on leaded gasoline](#).
3. **Costs increase faster than profits:** Generally speaking, as you manufacture more of a product, the cost per unit decreases or remains the same. However, that's not always the case, which can create enormous budget problems as your business grows. For instance, this problem is especially common with companies that try to [move to cloud computing](#)—the more cloud storage and processing your company uses, the more your costs will increase, often far in excess of what you predicted.

Commit Long-Term

Hormozi points out that understanding your market takes time. Therefore, rather than frequently shifting focus and wasting time getting to know new markets over and over again, **commit to just one market and strive to understand it deeply**. Mastery of your chosen market can lay a strong foundation for sustained success by steadily building a base of loyal, paying customers.

(Shortform note: While devoting your energy to learning and mastering one particular market is a reasonable approach, not everyone agrees with it. For instance, in *How to Get Rich*, self-made millionaire Felix Dennis argues that you should *not* focus too much on any one particular market or industry, and instead be ready to [seize any new opportunity that arises](#). In fact, many companies that are highly successful today have followed Dennis's approach. For example, Nintendo—now famous for its massive video game franchises like *Super Mario Bros.*—started out [manufacturing playing cards](#).)

Maximize the Offer's Appeal

Now that we've covered the basic elements of a successful offer, we'll cover Hormozi's advice for maximizing its appeal to customers. To do so, you'll **leverage a few psychological tools that make it harder for customers to turn your offer down**. These include: creating a sense of scarcity and urgency, using bonuses to increase the product value, offering guarantees to lower the buyer's risk, and choosing compelling product names.

Psychological Strategy 1: Increase Demand Through Scarcity

The first tactic to increase an offer's attractiveness is creating a sense of scarcity by limiting the *quantity* of your product and by limiting the *timeframe* when people can buy it. Hormozi writes that **scarcity plays on our natural inclination to value what seems rare or exclusive** and can ramp up both demand and the perceived value of your product, meaning people will pay a higher price for it.

(Shortform note: According to psychology research, wanting what's hard to get is a [common phenomenon](#). It happens because [your brain releases dopamine](#) when you work toward a goal and the more difficult that goal is (in this case, acquiring something that's hard to get), the more dopamine your brain produces. In other words, scarcity works like a drug: When people are trying to get something rare, they're really chasing a dopamine high.)

Limited Quantity and Limited Time Frame Promotions

Hormozi describes the following ways to create scarcity around the quantity of product:

- Offer a limited number of products or bonuses.
- Announce one-time-only sale.
- Set a cap on customer numbers, potentially with a waiting list.
- Be open about how much of your product is left (for example, by writing "75% sold out" on your website).

Publicly sharing how close you are to reaching capacity or how close you are to selling out can enhance trust in your offer, as it confirms that others have already decided to purchase it. It's a form of social proof that implies a collective endorsement of your product's value. Similarly, let people know when you've sold out. Hormozi explains that this not only gratifies those who made a purchase (they'll be relieved they didn't miss out) but also creates a sense of urgency among potential customers for future offers. Knowing they missed out once, they'll be more inclined to act quickly next time to avoid the same mistake.

Similarly, restricting the timeframe in which people can make a purchase also nudges customers to act swiftly. One way to encourage urgency is through strategic promotions tied to a season or another short period. Even if discounts are a regular occurrence, framing them as limited-time offers can lead to a surge in sales. For example, you might offer a "New Moon Sale" for one day only, every month.

Leverage People's Fear of Missing Out

As Zig Ziglar notes in [Secrets of Closing the Sale](#), limited-time offers and limited-quantity products work because people tend to feel the pain of losing something (like an offer or an opportunity) more acutely than they feel the pleasure of gaining something of equal value. In other words, humans are wired to be [more motivated by the fear of missing out](#) (FOMO) than by the prospect of acquiring something new.

Marketers and businesses exploit this quirk by creating artificial scarcity through time-limited deals or restricted product quantities. When consumers perceive that an opportunity is fleeting or that a product might become unavailable, it triggers a sense of urgency and potential loss. FOMO often overrides rational decision-making processes, prompting people to act quickly to avoid the imagined loss. As a result, limited offers can be highly effective in driving sales and encouraging immediate action from customers who might otherwise delay or forgo a purchase.

The Exploding Offer Strategy

According to Hormozi, you can also create urgency by framing your offer as an “exploding opportunity”—one that diminishes in value over time. For example, you might offer discounts on a wedding planning service if the customer books very far in advance, with prices increasing over time. Or you might offer an investment opportunity in a promising company where the initial cost to buy stock is far lower than the anticipated future value, but only if you invest early. By emphasizing the potential for benefits to decrease over time, you encourage customers to jump on the deal before it's too late.

(Shortform note: This tactic of making an offer that decreases in value over time takes advantage of a psychological quirk that causes people to confuse *urgency* with *importance*. Business consultant Stephen Covey notes this mental pitfall in *First Things First*, although Covey [teaches readers how to avoid this tendency](#), while Hormozi is urging you to *leverage* it to make more sales. In short, if something is time-sensitive—meaning that it needs to be done during a certain timeframe or not at all—people are more likely to do it because they confuse “must be done now” with “must be done.”)

Psychological Strategy 2: Bonuses and Strategic Timing

In addition to scarcity and urgency, bonuses—extra items or services presented as “free”—can significantly enhance the attractiveness of your offer. The key is to **increase the price of your product so that you can add extra items and frame them as free to the customer**. This makes the customer feel like they're getting an exceptional deal.

For example, you might say, “At no additional cost, we'll give you five accessories to go with your new gadget.” This offer appears more generous than the gadget alone, even if you've already factored in the price for those bonus items. If you add bonuses one after another to your original offer, the deal becomes increasingly irresistible.

The timing of when you reveal bonuses can also impact their effectiveness. Hormozi recommends that you offer bonuses *after* you pitch a product by itself: Start by presenting the main offer, and if the customer decides to purchase it, offering them a bonus afterward will be a pleasant surprise that adds value. If they're hesitant initially, and then you offer the bonus, this can tip the scales in your favor. By offering an unexpected extra “gift,” you create a sense of obligation. The customer will want to repay your apparent generosity by accepting the new offer.

Create a “Perceived Value,” Then Exceed It

This strategy works by leveraging the psychological principle of [perceived value](#) to create a compelling proposition for customers. When you first set a price for a product, it establishes an anchor point in the customer's mind, effectively defining how much they believe that item is worth. This initial valuation then becomes the baseline against which any additional offerings are measured.

So, by then adding extra products or services at no additional cost (often called [bundling](#)), you increase that perceived value without changing the price. Since the customer's perception of the original product's worth remains tied to the initial price point, these bonus items are seen as pure added value. This strategy effectively amplifies the perceived benefit-to-cost ratio in the customer's mind, making them feel as though they're getting significantly more value for their money.

Psychological Strategy 3: Build Confidence with Guarantees

The next strategy to increase the psychological appeal of your offer is using guarantees. **Hormozi says that by offering a guarantee, you're shifting risk from the customer to yourself, which can lower their**

resistance to making the purchase. It also demonstrates your confidence in your product: It's a way of saying, "We believe in our product so much, we're willing to back it up." This level of confidence can be infectious and drive more customers to commit to a purchase.

Guarantees should be clear about the conditions, including the time frame and the form of compensation, such as a full refund, partial credit, or an extended period of free service if the initial offering doesn't meet their needs. Hormozi further explains that there are several variations of guarantees you can offer, including the following:

Unconditional Guarantees: These provide a straightforward promise, like satisfaction or your money back within a specific period.

Conditional Guarantees: These depend on the customer meeting certain criteria or actions. For example, you might only offer a refund if a client isn't satisfied after attending all the sessions in the program you offer.

Outcome-Based Guarantees: These are tied to the customer achieving some result from your product. For example, you might provide consulting services and instead of charging upfront, take a commission once the customer achieves the desired outcome, like landing new clients.

Guarantees Put Your Skin in the Game

Guarantees like Hormozi describes here can be seen as a practical application of *Skin in the Game*, as popularized by risk analyst Nassim Nicholas Taleb. By offering such guarantees, you are effectively putting yourself on the line, and thereby aligning your interests more closely with those of your customers. This self-imposed risk creates a powerful incentive to [ensure the quality of your products and services](#), as any failure to meet customer expectations could result in financial losses for you through refunds or repairs.

This alignment of interests exemplifies Taleb's principle that decision-makers should have personal stakes in the outcomes of their choices. In this case, while you should profit if your products are good, Taleb would argue that you should also face consequences if your products are not of good quality. Having "skin in the game" in this way motivates you to be more diligent in your quality control, customer service, and overall product development, ultimately leading to better outcomes for both your business and your customers.

Psychological Strategy 4: Create an Intriguing Offer Name

The last strategy for increasing the psychological appeal of your product is to create a compelling offer name. **A well-crafted name can not only capture attention but also clearly communicate the value and urgency of what you're selling.** Hormozi describes five strategies for creating a good name: Create an attractive theme, target specific customers, appeal to deep desires, define the time frame, and evoke uniqueness. (These correspond to what he calls the "MAGIC Formula": Magnet, Avatar, Goal, Interval, and Container Word.) He recommends using three to five of these, to keep your offer name succinct and memorable. Let's explore each of these in more detail.

Create an Attractive Theme: Make your offer more intriguing by coming up with a special occasion or a themed promotion, like a "Winter Solstice Sale." This provides a compelling reason for customers to engage with your offer.

Target Specific Customers: This part of the name specifies what kind of customers your product is meant for. Tailor your offer's name to resonate with a particular demographic or interest group. A more "local" name tends to be successful. For example, you might advertise your lawn chairs and outdoor gear to "Soccer Moms of Waterville." This specificity makes potential customers think that the offer is crafted just for them.

Appeal to Deep Desires: Use words or phrases that evoke your targeted customer's deep desires. For example, you might include the phrase "Effortless Marketing," which directly speaks to the desire for a simple solution that will facilitate the customer's business success.

Define the Time Frame: Be specific about the time frame associated with the offer—how long the offer will be available or how soon the customer can expect results. For example, you might advertise a "Memorial Day Weekend Sale" or include the phrase "Double Your Clients in 6 Months."

Evoke Uniqueness: Choose a term that encapsulates how unique your bundle of services or products is and suggests that what you're offering isn't just another commodity. Exciting words like "Booster" or "Revolution" can convey the transformative nature of your offer.

Combining a few of these elements will lead to compelling offer names such as "10K Club: High Ticket Client Accelerator," "Luxury Valentine's Escape for Newlyweds," or "72-Hour Black Friday Cyber Blitz."

Tip: Tell a Story With Your Product

While an interesting name is a good way to attract customer attention, some experts would argue that it's only a start and that the way to really catch people's interest is to tell them a story.

In *All Marketers Are Liars*, marketer Seth Godin argues that traditional marketing (like commercials, slogans, and jingles) is outdated. He instead emphasizes the importance of storytelling in marketing, asserting that good marketing involves [spreading ideas through compelling narratives](#) that resonate with consumers across various fields like product marketing, dating, politics, and job hunting.

The power of storytelling lies in appealing to people's emotions and beliefs, shaping their perceptions, and influencing purchasing decisions based on emotional connections to your product, your company, or even you personally. For example, Elon Musk's company Tesla found strong initial success by telling potential customers stories about how Tesla would [save the environment](#) with innovative new electric car technology. The implication was that Tesla's cars would help bring about the end of traditional gasoline-powered vehicles (and their harmful emissions).

Exercise: Plan Your \$100M Offer

Now that you've read Hormozi's advice on how to create and market a valuable product, start thinking about the product you'd like to sell.

For instance, perhaps there's a skill you could teach, a disability challenge you could help with, or a part of daily life you could make easier.

What will your product do to fulfill that need?

Review the four psychological strategies we discussed. Which one would be best suited for the product you're offering?

How will you implement that strategy?
